

## Stuv 30 Compact In

The Stuv 30 Compact-in is specially designed for low-energy or compact houses; it has a smaller combustion chamber and reduced heat output, it therefore only consumes what is necessary. As with the rest of the Stuv 30 range, the Compact-in has three burn chambers allowing the stove to be run as an open fire, glass fronted fire or a slow burner.

### Specifications

Height: 2000mm

Width: 503mm
