

## Clearview Solution 500 installation

Customer Aspiration: A freestanding traditional stove to warm an extension and fit in with the surrounding.

Special Requirements: Positioning of the stove in relation to the open door way must be a safe distance. The chimney is currently very close to the doorway.

To keep the installation as un-intrusive as possible we used a slate hearth to match the already laid floor. By adding a couple of bends to the flue we are able to move the [Clearview Solution 500](#) a safe distance away from the doorway. The end result is really lovely and enables the new extension to be used all year round.
