

Clearview Pioneer 400

The Pioneer is the smallest of the Clearview stoves but one of the most efficient multifuel stoves on the market. Featuring a cast iron door which is adjustable to maintain air tightness, it will burn only one kilo of wood an hour, stay in overnight, boil a kettle and heat your water if the optional boiler of 8000btu is added. This stove is equally at home in a country cottage, a modern apartment, mobile home or a boat. Clearview stoves come in a choice of seven colours, brass or steel door fittings and a top or rear flue position. You can also opt to have 2, 4 or 6 inch legs changing the height of the unit.

Specifications

Height: 623mm
