

RAIS BIONIC FIRE

Rais Bionic Fire is a newly designed stove, which makes it possible to be a very environmentally aware owner of a wood-burning stove. This stove is so effective that there is hardly any residual particle emission. This is due to the double combustion chambers, in which post-combustion takes place in the bottom chamber.

Furthermore, Bionic Fire has automated air regulation so that you no longer have to worry about whether you fire the stove properly. Rais call this CleverAir. This high-tech stove keeps up with the modern user who chooses with the heart and the brain. The streamlined, organic shape underlines the advantages of Bionic Fire.

Specifications

Height: 1252

Width: 406

Fuel: Seasoned Wood

Output: 3kw - 5kw
