

Stuv 30 Compact in Fireplaces

This efficient stove comes with a series of claddings to make up modern fireplaces. This is just one example of what is available. Most stoves currently available on the market are too big to install in energy-efficient, better insulated homes. As a result, optimal use is not made of these excessively powerful stoves. The smaller cast iron combustion chamber of the Stuv 30 compact gives an output of 3-9kw, making it suitable for today's highly insulated new builds. (The Stuv 30 Compact is on a turning plate which allows you to choose the direction of your stove to distribute the heat where you want). This stove is also available as a high model.

Specifications

Height: 1040mm

Width: 465mm

Depth: 477mm

Fuel: Seasoned Wood

Output: 3kw - 9kw
