

Dru Virtuo 75

Unlike ordinary electric fires, the Virtuo 3D flame picture is generated by a unique projection system that replicates the image of a real log fire, from the tall, dancing flames right down to the glowing LED fire bed and flying embers. You can even hear crackling wood!

The exclusive features don't stop there. The logs are impressively realistic and there are three different flame variations, including special light effects that can be updated. In addition, there is a remote control and an exclusive control app with a timer and thermostat.

Specifications

Height: 550

Width: 830

Depth: 510

Output: 0kw - 2kw
